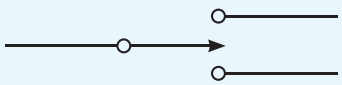
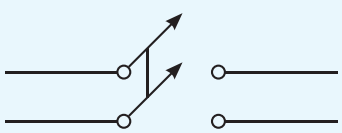
SPST
SINGLE POLE / SINGLE THROW

A Single Pole Single Throw (SPST) switch is a switch that only has a single input and can connect only to one output. **This means it only has one input terminal and only one output terminal.** A Single Pole Single Throw switch serves in circuits as on-off switches. When the switch is closed, the circuit is on.



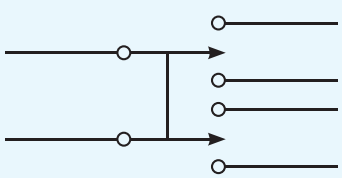
SPDT
SINGLE POLE / DOUBLE THROW

A Single Pole Double Throw (SPDT) switch is a switch that only has a single input and can connect to and switch between the 2 outputs. **This means it has one input terminal and two output terminals.** A Single Pole Double Throw switch can serve a variety of functions in a circuit.



DPST
DOUBLE POLE / SINGLE THROW

A Double Pole Single Throw (DPST) switch is a switch that has 2 inputs and 2 outputs; each input has 1 corresponding output. **Each of the terminals of a double pole single switch can either be in the on position (closed) or in the off position (open).**



DPDT
